Project Mentor

Julio C. Mata, Paint Specialist

Problem Statement

- An ergonomically friendly hand tool is not implemented
- Team members are subjected to fatigue and accidental injury
- Task subjected to human error

❖ Multi-Shot & Pneumatically powered Single Shot tied to continue to production

Final Design – Concept 1: Single-Shot

Final Design – Concept 2: Multi-Shot

Prototypes

Single-Shot

Multi-Shot

Test and Modification

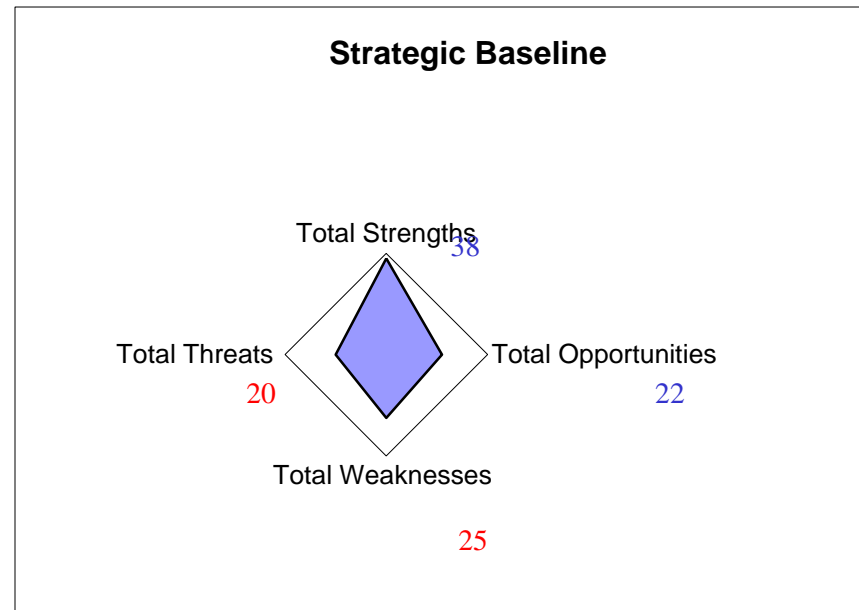

Created a palm handle for added comfort

Business Plan

- Core business:
 - No competition in the industry
 - Implement tool into all of Toyota's manufacturing plants

- SWAT:

Fabrication and Assembly

- ❖ Autodesk Inventor 2014 for Design
- ❖ Prototypes made using a uPrint SE Plus 3D printer
- ❖ Conventional machining

Project Introduction

PROBLEMS

- Design for improvement for an ingot growth oven frame
- Current design obsolete

OPPORTUNITIES

- Create mobility
- Computer user friendly

Customer Needs

Constraints

- The oven frame keeps the ingot stable
- The oven frame dimension is adjustable
- The structure of the oven allows easy access to reach ingot
- The oven frame is mobile

Criteria

- The cost of material is minimized
- The frame is not taller than 6 feet

Concept Generation

Single oven with
unique storage
potential

Single oven keeping
material to a minimum

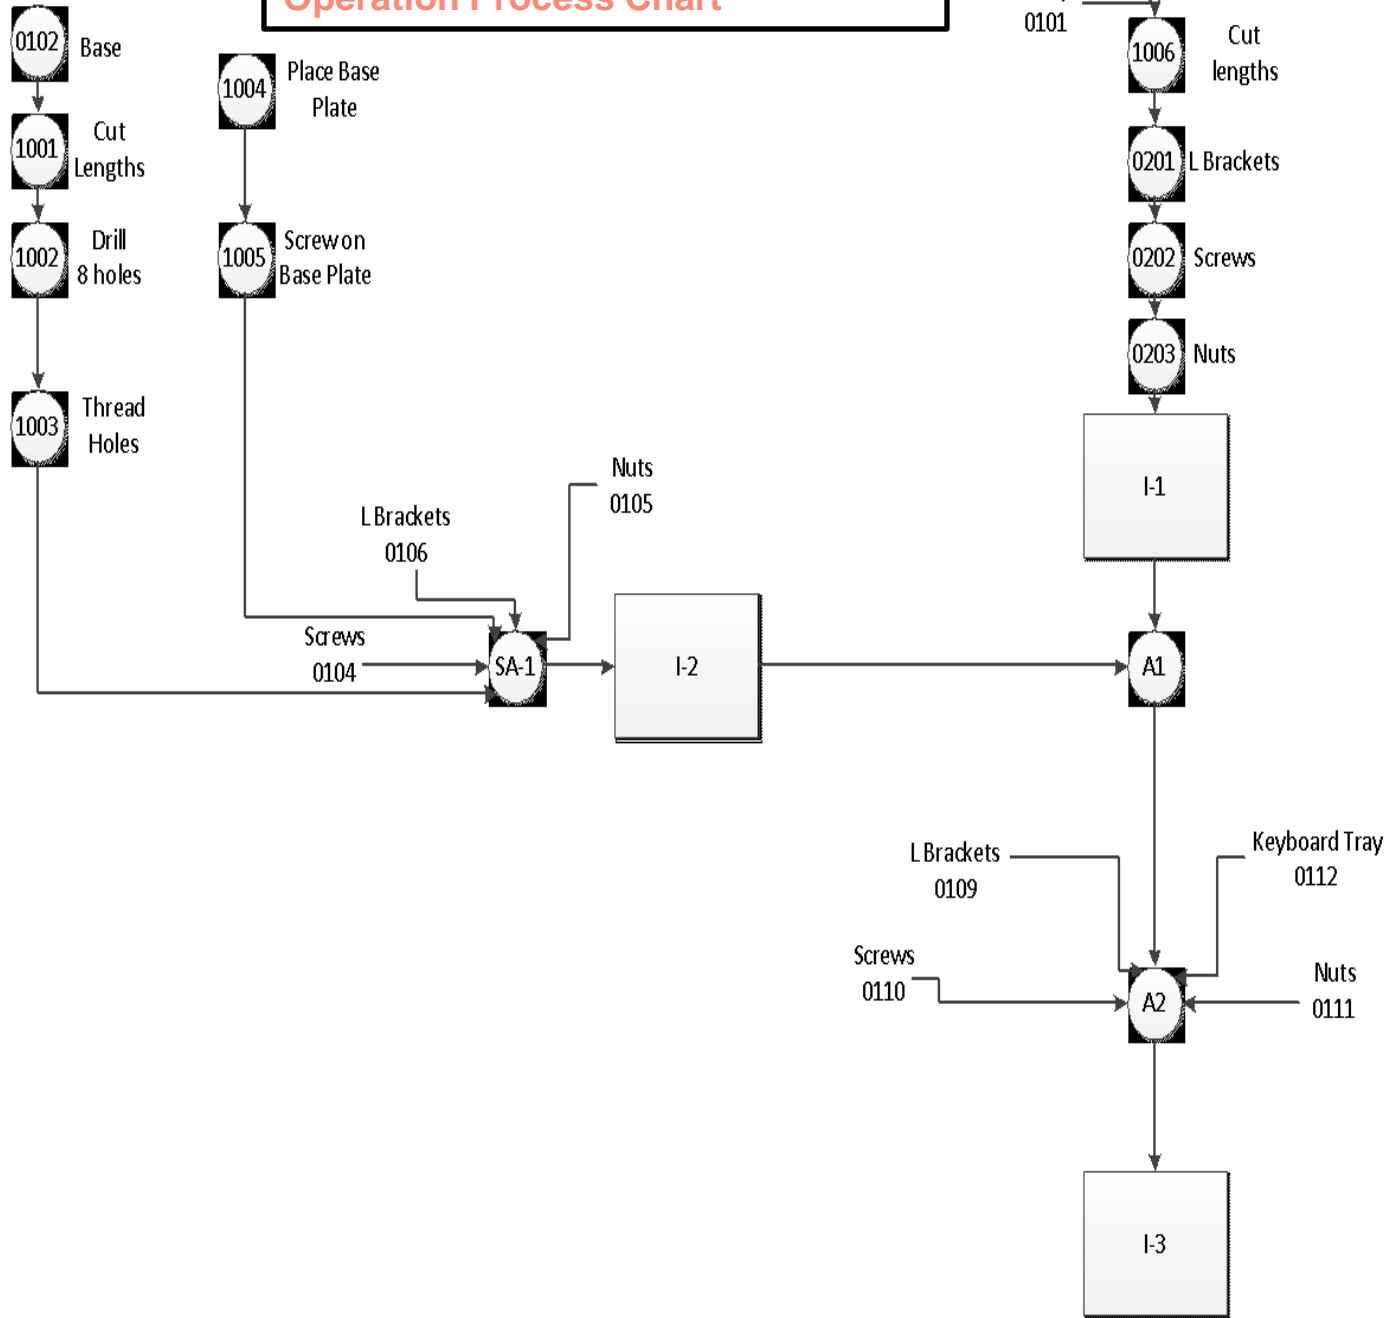

Dual ovens with
one frame

Final Design

Operation Process Chart

Manufacturing Processes

Drill press to create holes in the gusset plates

Water jet to cut gusset plates

Wet saw to cut extruded t-slots into desired length

Assembly Processes

Final product

The improved design (right picture) has many upgrades compared to the original design (left picture).

Improvements include:

1. Wheels for mobility
2. Glides for stability
3. The ability to hold two processes at once
4. Ability to hold all components
5. Better adjustability

Ingot Growth Oven Frame

Murphy, Everett; Murphy, Graham; Lurie

Test Results:
The used structure to test the structure's control of gravity which allows for growth of the structure which is due to the geometry of the structure. They will present the test results to determine if the structure has the ability to meet the required capacity and stability. It passed all tests.

Conclusion:
The information that was included in the following report will provide a guide to help the structure user have a clear understanding of the structure's components. The structure information can be used to help the user.

Background Information

Trekease

Background Information

Our Product:

- The “BenchWarmer”
 - This product is a developmental workout/ rehabilitation device for people with disabilities or confined to a wheelchair.
 - This product is based around having the freedom to workout and not be in a fixed location.
 - This product uses a bar spliced by a resistive spring to stimulate exercise and give a full free range of motion.
 - This product is easily attachable and remove able from the chair.

Our Competitor:

- The “Love Handles”
 - This product is a workout device for people with disabilities and for rehabilitation.
 - This product permanently attaches to the chair.
 - This product uses a set of resistive plates to stimulate exercise.

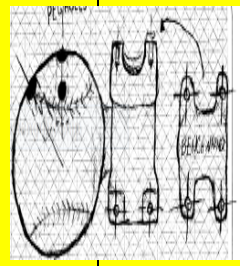

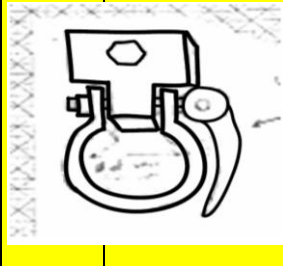

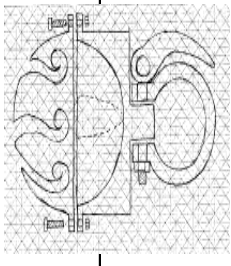

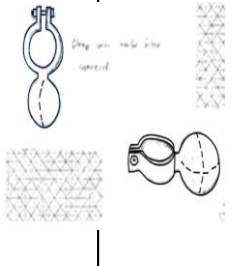

TOP NEEDS TOP METRICS

| # | Needs | Impact |
|------|--|--------|
| 1 | The product must be affordable. | 1 |
| ★ 2 | The product must attach to the wheelchair. | 5 |

Bench Warmer Final Design

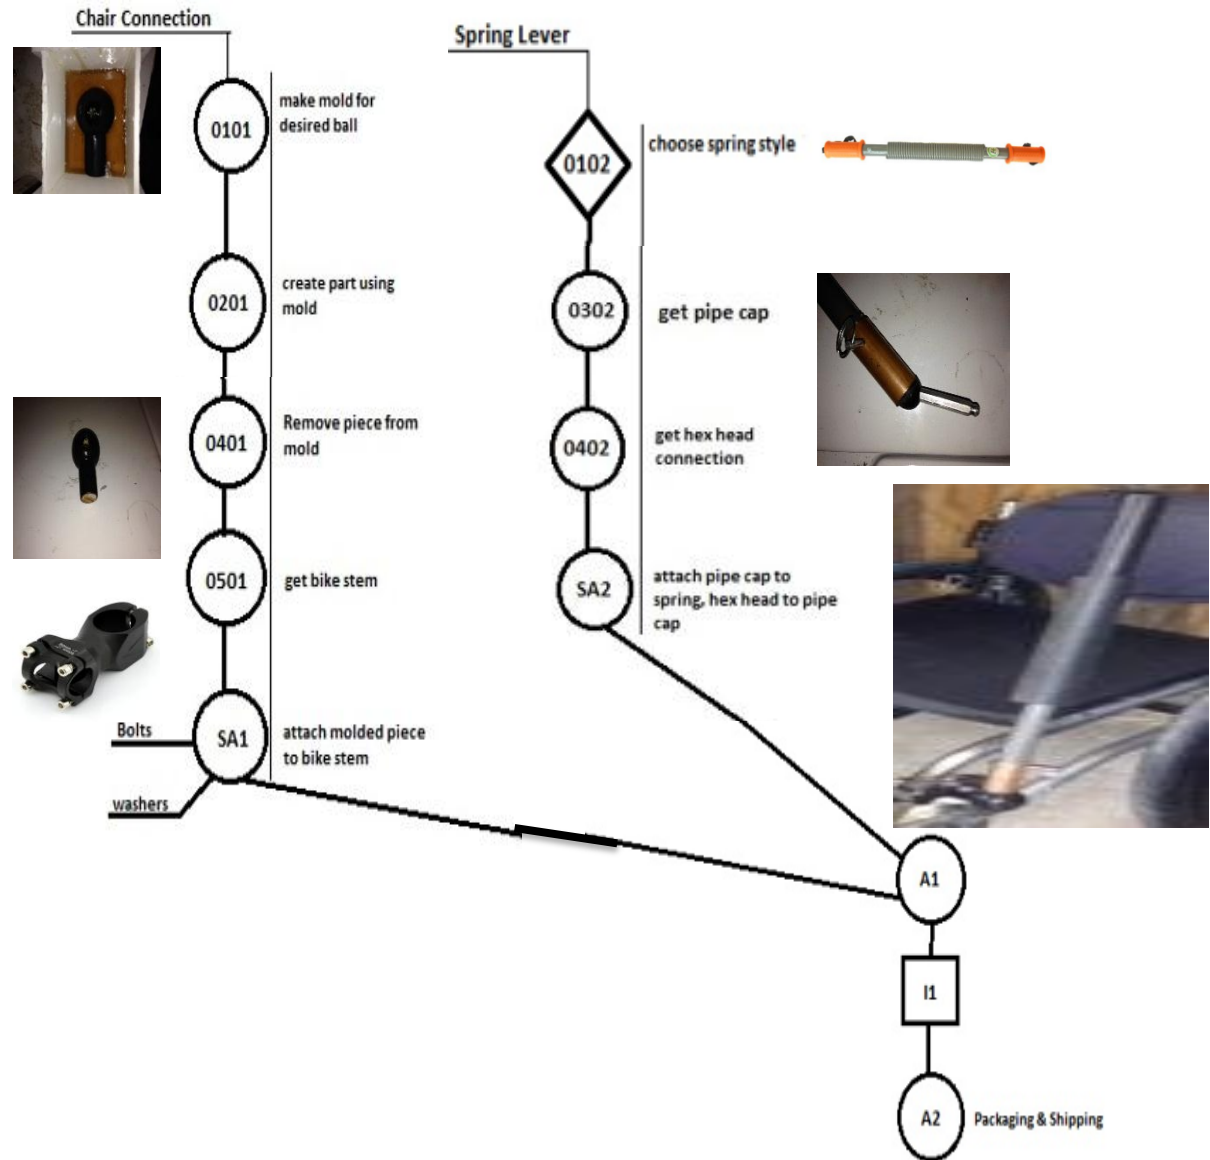

BenchWarmer Final Design Exploded Drawing

- Versatile model (optional sport themed design)
- Cast from high strength materials
- Simple assembly
- Outsourced for high quality parts
- Aesthetically pleasing
- Approved for prototyping

| Bill of Material | |
|------------------|------------------|
| Quantity | Description |
| 2 | Spring Bar |
| 2 | Bicycle stem |
| 2 | Bar mount |
| 2 | Ball/ Base Mount |
| 2 | Hitch Pin |
| 2 | Safety Foam |

Operation Process Chart

Side By Side Comparison

The Benchwarmer:

- Has full range of motion.
- Has resistance up to 30 kg.
- Non-intrusive and able to be broken down.
- Will not scratch chair.
- Optional bases for multiple aesthetics.
- Durable
- Price: \$395

Love Handles:

- Only has motion in the +/- X direction.
- Has resistance up to 8 lbs.
- Bulky and permanently attached and unable to break down.
- Will scratch paint on chair.
- Bulky and unattractive.
- Fragile
- Price: \$235

Product Development

Make/Buy Decision

Manufactured

- Hex-Ball Spring Bar Connector

- Holding Ball Attachment

Final Product

Financial Plan

SWOT

STRENGTHS

- Strong internal stress capabilities
- Relatively weak opposition
- Patent capabilities
- Most parts made in house
- Stronger components than opposition
- Our target group is big into athletics
- Cheap costs (for us and customer)

WEAKNESSES

- Most important component is outsourced
- Company is new (much marketing to be done)
- Targeting a group without money (relying on parents to buy)
- Price may lead customer to believe product is cheap

OPPORTUNITIES

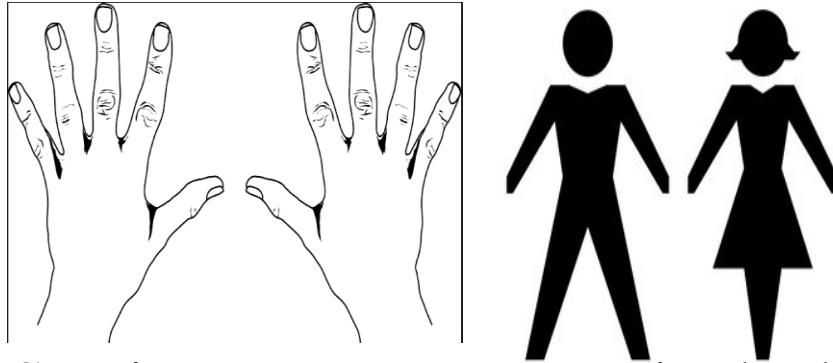

- Ability to get into veterans program (\$\$\$)
- Rookie/MVP/ other models?

THREATS

- Much opposition with marketing already established
- Strong but fairly basic design, opposition can use that against us

Multicultural, globalization, ethics

Any gender, and body size, Left/right hand

Serving veteran community by helping for rehabilitation

ANSI standards used

Side By Side Comparison

The Benchmarker:

- Has full range of motion.
- Has resistance up to 30 kg.
- Non-intrusive and able to be broken down.
- Will not scratch chair.
- Optional bases for multiple aesthetics.
- Adjustable
- Price: \$395

Love Handles:

- Only has motion in the +/- X direction.
- Has resistance up to 8 lbs.
- Bulky and permanently attached and unable to break down.
- Will scratch paint on chair.
- Bulky and unattractive.
- Fragile
- Price: \$235

MEMBER THE TEXAS STATE UNIVERSITY SYSTEM™

Centrifugal Power Transmission

Abdel-Muti Zabalawi

Steven Barrantes

Abel Ardis

Shelby Huff

Jose Medina

About Our Sponsor

Mohammed Khodabakhsk

New Beginnings, based in
California

Project:

To optimize a power transmitting device utilizing centrifugal force created by spinning cams (weights).

Concept Background

- Resultant forces causes a moment about the center axis.

Identifying Customer Needs

Need Statements

| | |
|---|----------|
| The system must transmit power efficiently. | <u>5</u> |
| The system must lift heavy objects safely. | <u>5</u> |
| The design must be able to sustain the cyclical stresses associated with the rotation of the weighted cams. | <u>5</u> |
| The mechanism must be flexible for testing. | <u>4</u> |
| The system must rotate. | <u>4</u> |

Want Statements

| | |
|--|----------|
| The design should be made of mostly stock and premade components to reduce cost. | <u>4</u> |
| The apparatus can be easily accessed for maintenance. | <u>4</u> |
| The mechanism is lightweight. | <u>3</u> |
| The mechanism varies in number of cams. | <u>3</u> |
| The design has a long product life. | <u>2</u> |

Proposed Design

Fabrication

Milling of Center Axel Shaft

Third and Final Model

- Design sports shorter arms to provide better stability thus reducing vibration produced.
- Slip ring used to safely power motors.
- Cam design is significantly different, reducing weight and length.

Conclusions and Future Work

Outlook

- Part changes
- Optimization: Weight, arms, cams, motors
- Designing commercial products: Windmill (low speed wind)

Bryan Avila
Tim Hartline
Dillon Sterling
Patrick Stalnaker

Mars Drillers

Purpose of Project

- To look for signs of water and life on Mars.
- Develop alternate designs from past and present drilling systems.
- The atmosphere is 95% CO₂
- Surface is similar to permafrost

Customer Constraints

- ❖ Produce and cut core samples that are 10 cm x 2 cm.
- ❖ Hold the core samples for future extraction.
- ❖ Be as compact as possible.

Concept Selection

| | | | | |
|---|---|---------------------|---|-----------------------|
| Core Sample Cutting System |  | |  | |
| | Cam | | Flap Door | |
| Selection Criteria | Rating | Weight Score | Rating | Weighted Score |
| The cutting system weighs less than or equal to 45 kg. | 2 | 0.16 | 4 | 0.32 |
| The cutting system consumes less than 50 W-hr per sol. | 3 | 0.45 | 4 | 0.6 |
| The cutting system can extract sample cores and cuttings. | 4 | 1.2 | 2 | 0.6 |
| The cutting system is manufacturable | 3 | 0.54 | 3 | 0.54 |
| The cutting is able to operate after failure | 4 | 1.08 | 1 | 0.27 |
| The cutting system is low cost. | 2 | 0.04 | 5 | 0.1 |
| Total Score: | | 3.47 | | 2.43 |
| Rank: | | 1 | | 2 |

Bill of Materials

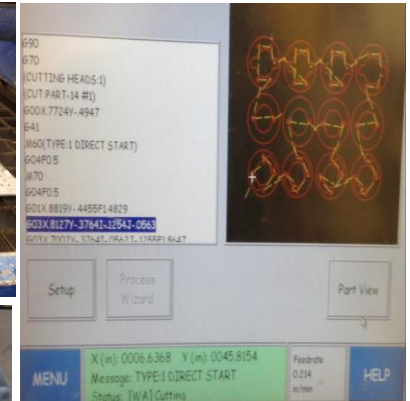

Operation Process Chart

Manufacturing Processes

- Rapid Prototyping
- Water jet Cutting
- Grinding
- Welding
- Drilling
- Bolting

Testing

Business Plan

- NASA applications:
 - MARS water exploration
 - Moon mining
 - Asteroid mining
- Oil and Gas
- Construction
 - Road
 - Concrete testing
 - Testing compaction of soil
 - Housing market
 - Testing soils before building
 - Geological samples

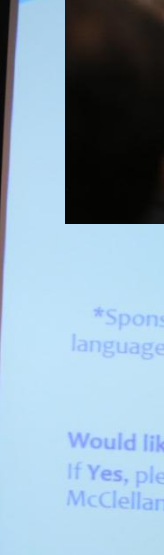

Multi-Culturalism

- Ambidextrous- Can be operated either left or right handed.
- Can be used by any gender, or race
- Can be easily converted to S.I. Units
- International coalition of students, educators, and professionals to achieve common goal
- Inspiration to many K-12 kids pursuing STEM programs
