

Sponsor Information

- 31 Degrees provides beverage dispensing machines and beverage product for customers
- Special events
 - Louisiana State Fair, the Fort Worth Livestock Show & Rodeo and various music and margarita festivals
- Longer-term partnerships
 - Schlitterbahn, the Dallas Cowboys, Typhoon Texas and FC Dallas

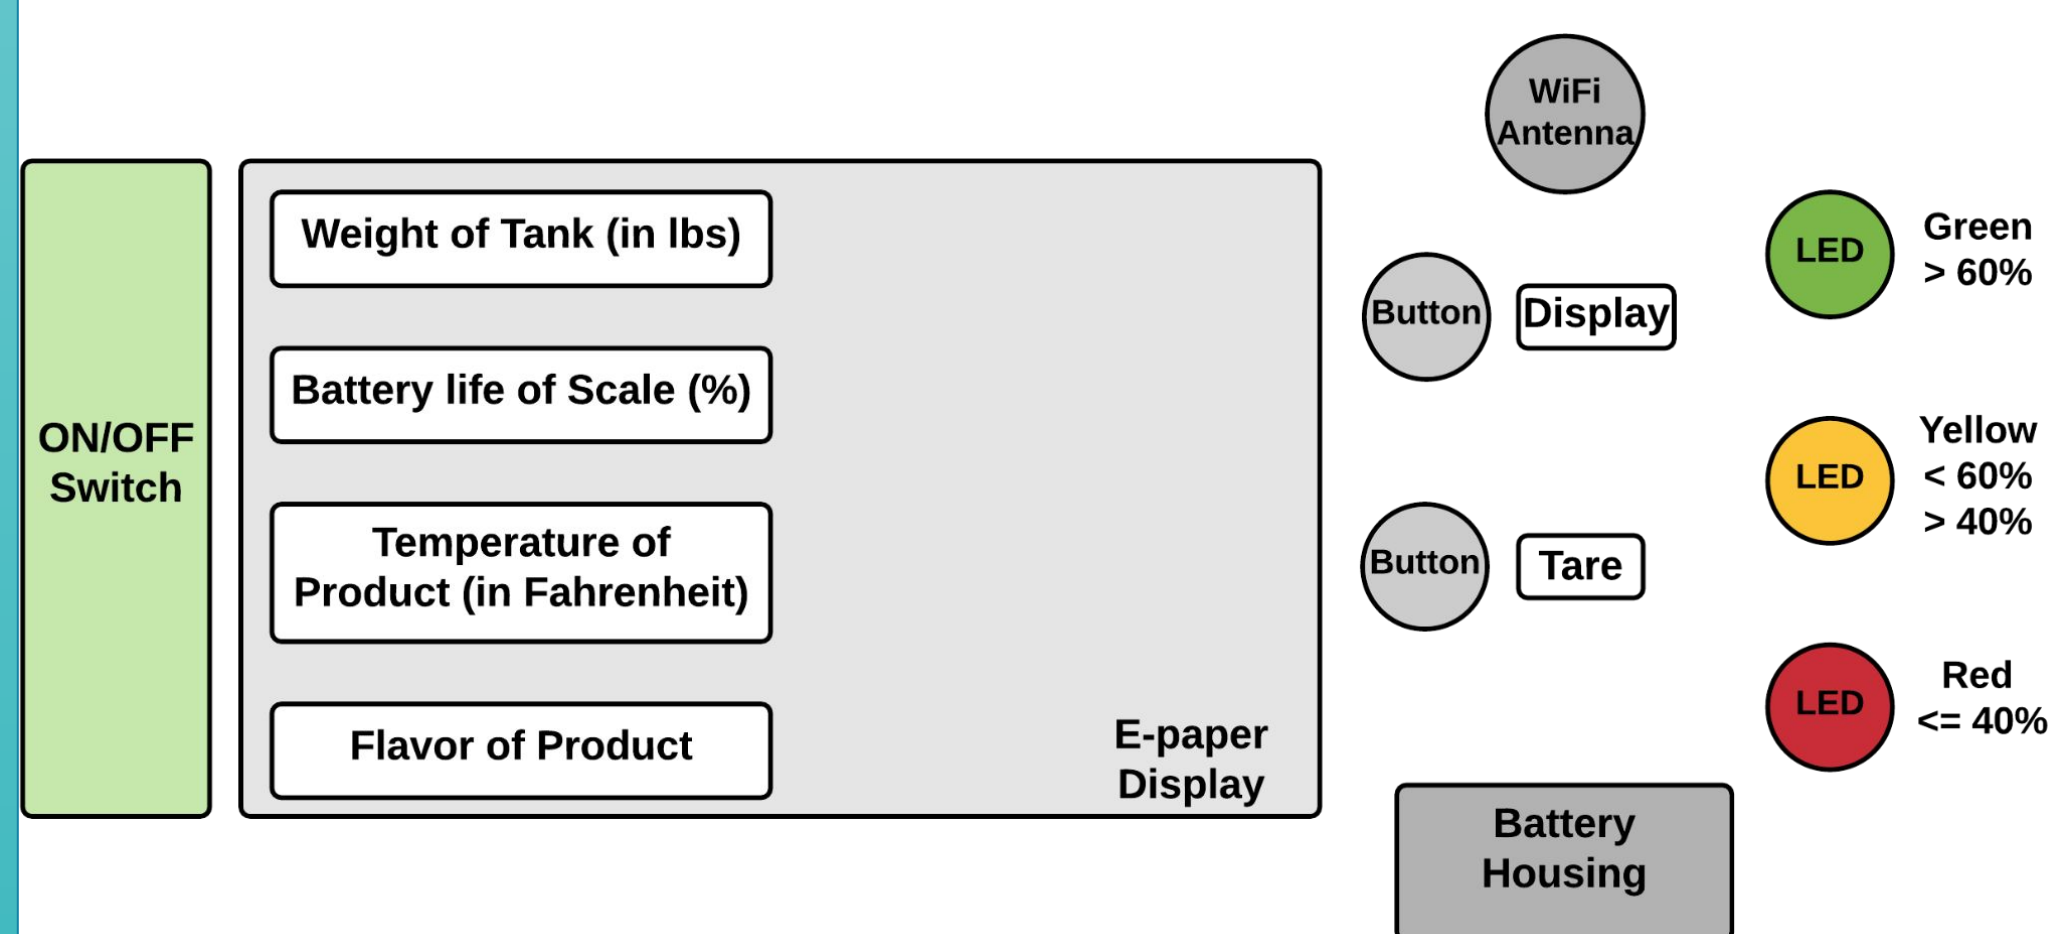

Why a Smart Scale System?

Our product is a smart scale system that enables event workers to monitor an operational dashboard that shows when a tank should be refilled, the flavor and temperature of the product, and the battery percentage. 31 Degrees can use this knowledge to make better cost-effective decisions, identify improper use of machinery, theft, and more.

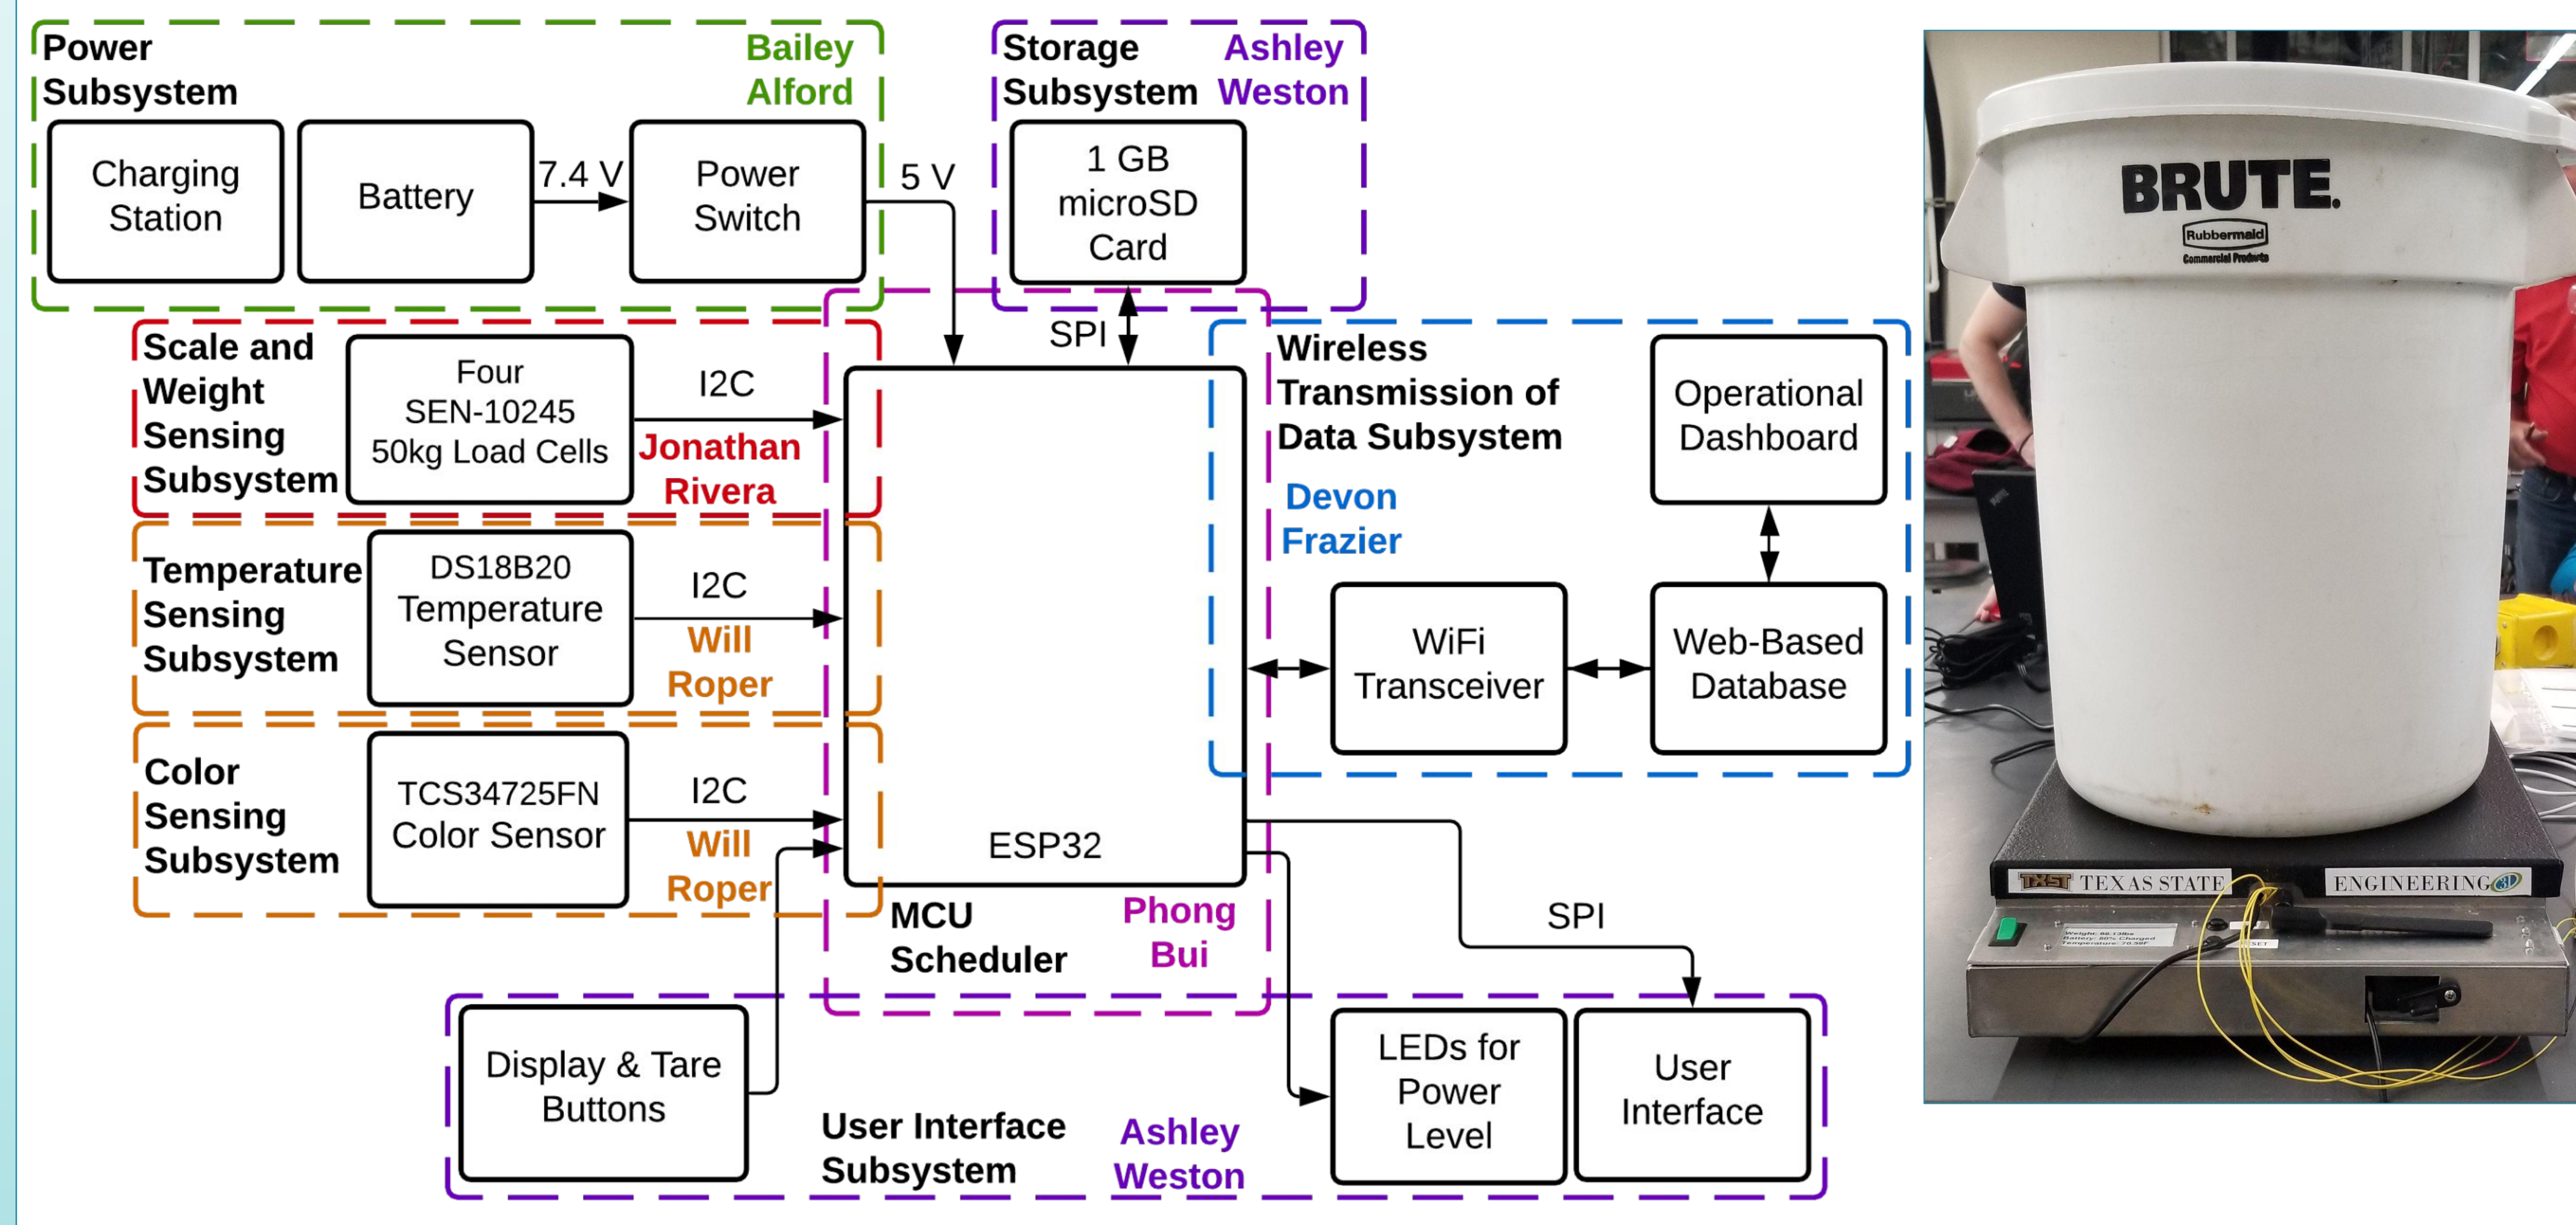

Design Approach

- Use several weight sensors in Wheatstone bridge configuration to increase weight capacity
- Operate scale on battery power to improve mobility and ease of use
- Transmit data via WiFi to an online MySQL database
- Use e-paper display for physical user interface
- Thermistor temperature sensor for temperature sensing and RGB color sensor for flavor matching
- microSD card for connectionless data storage

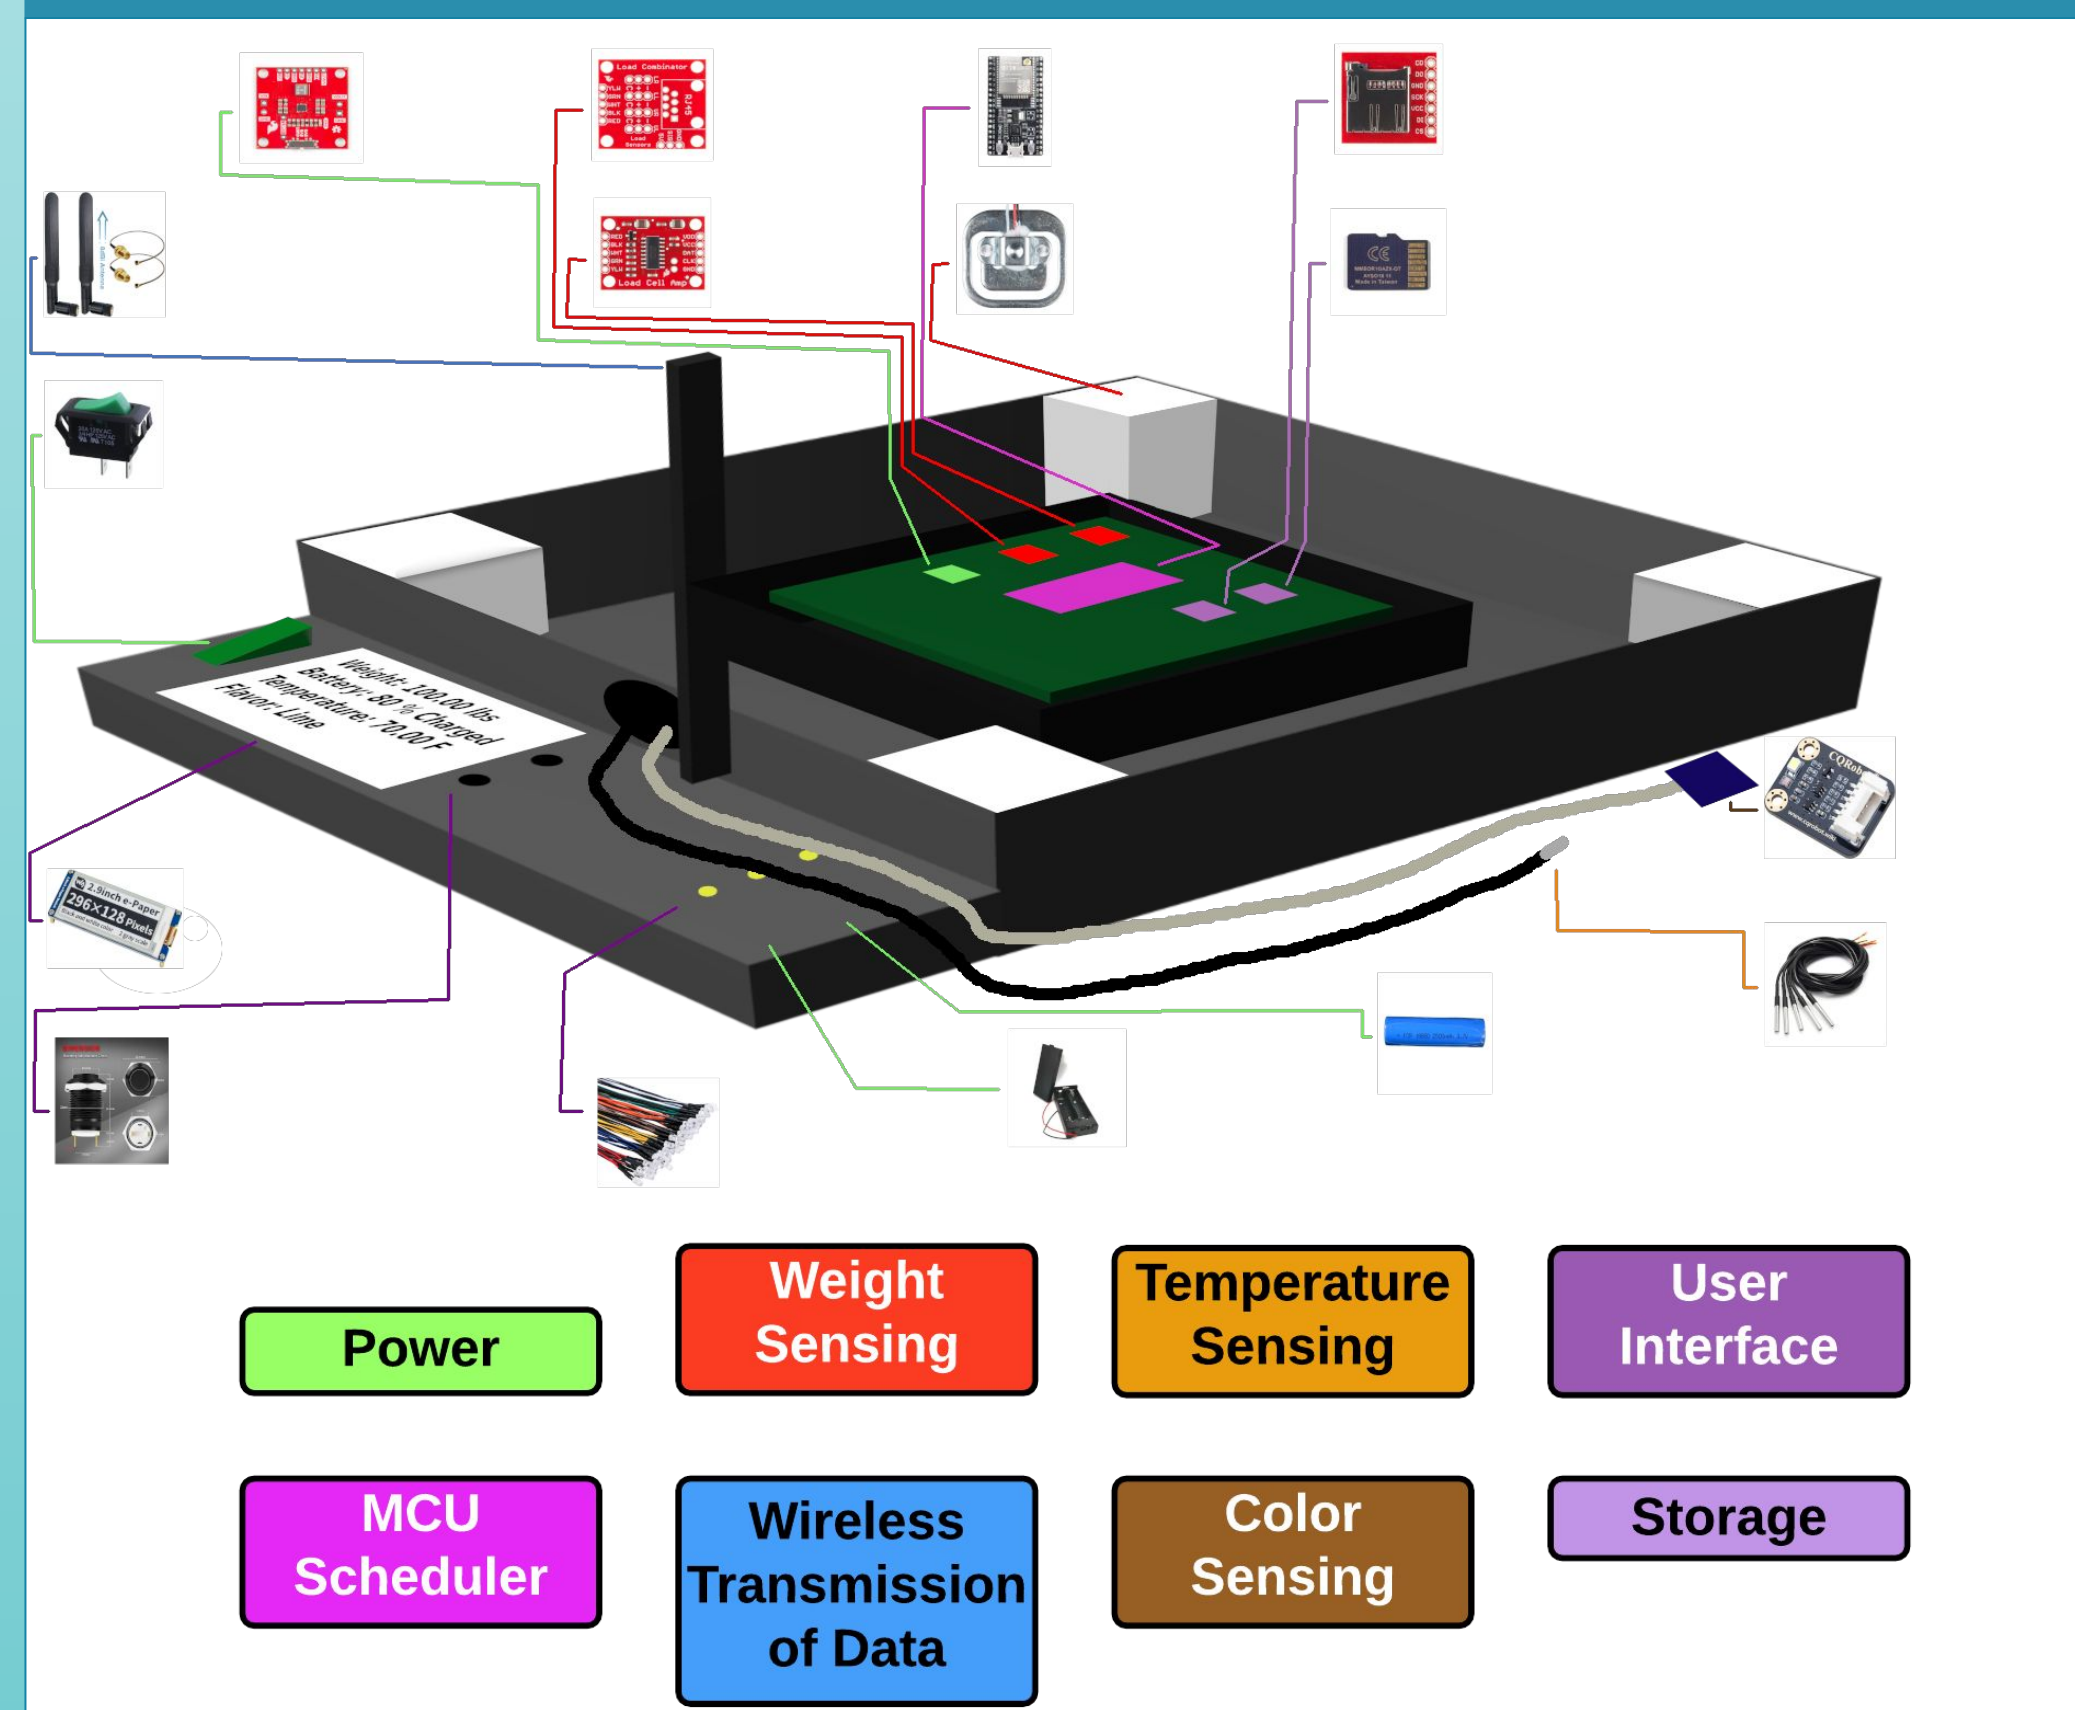

User Interface Design

Multidisciplinary Team

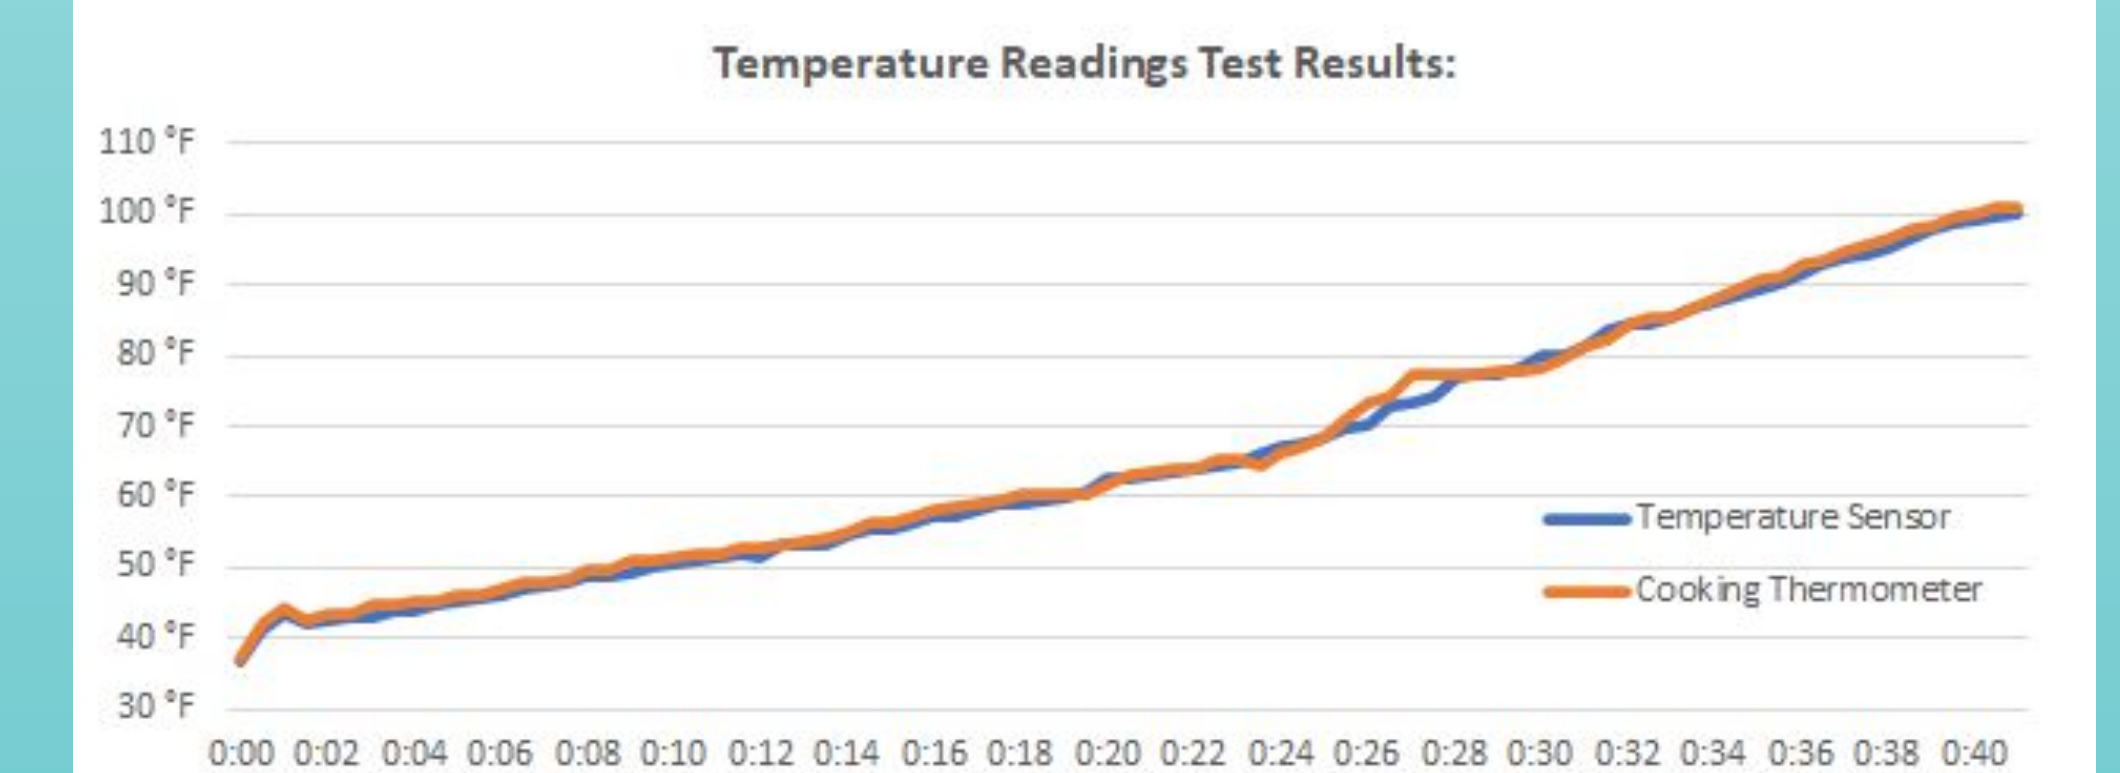

Meet the Electrical Engineering Team

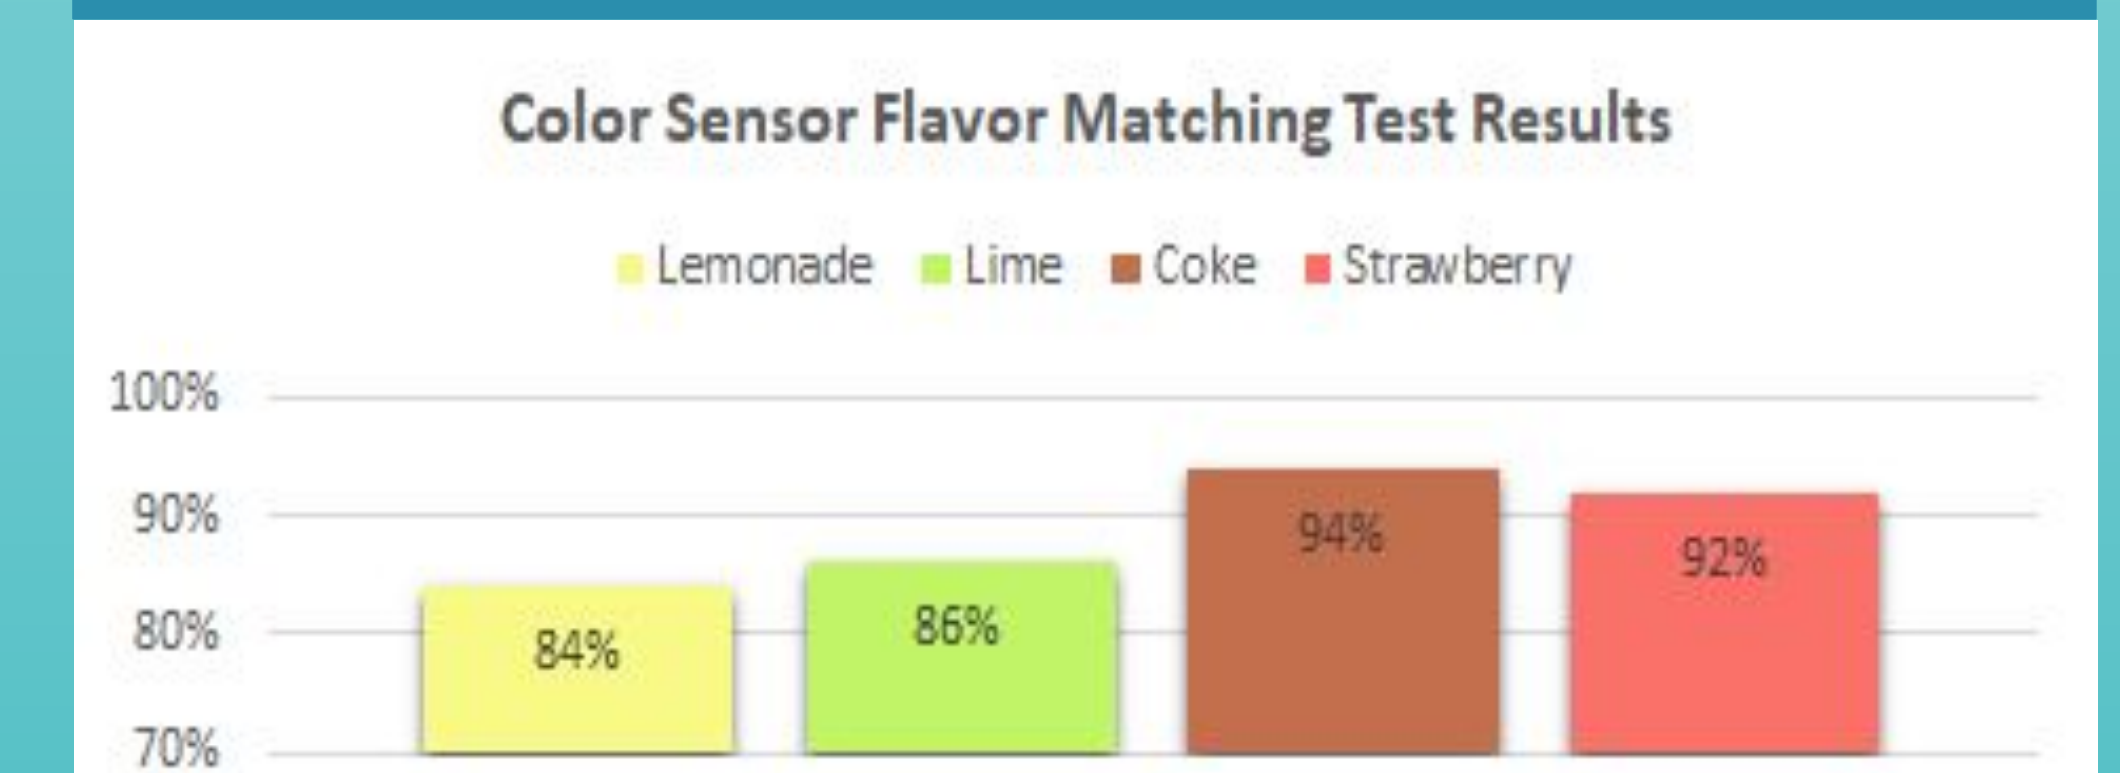

Testing

Requirement	Result
Collect data every 10 minutes and insert to MySQL database.	Sent weight, battery, temperature, and color data successfully from scale to database. PASS
Measure weight upto 410 lbs. within ± 0.1 lbs.	Measured 430 lbs. using dumbbells on the scale. PASS
Detect temperatures within 32°F to 100°F within ± 1 °F.	Matched temperatures with a cooking thermometer with 94% accuracy of ± 1 °F. PASS
Correctly match liquid color to drink flavor.	89% of 200 measurements aligned with manufacturer's given flavors. PASS
Save/send data in MicroSD card depending on WiFi status.	microSD correctly stored and sent data with WiFi off for 6 hours. PASS
Minimum battery life of 24 hours at 10-minute intervals	Battery percentage at 70% after running for 16 hours at 1-minute intervals. PASS

Temperature Sensor

Color Sensor
