

Team 2.08 Smart Leaf

Josh Meyer | Brogan McGraw | Dereck Ngo | Joseph Wylie |

Smart Leaf combines technology and gardening to create a new method for growing food. Our system can detect and alert the gardener to any unwanted growing conditions that the plant may be in. The system will also store this data for the user to analyze and determine trends in the environment. It does all of this while fitting into a ergonomic water-resistant case affixed with RGB lights that indicate the status of the system.
