

E1.03 - Robo Push-Pull

Our compact push-pull robot has been built with the specific purpose of maneuvering a tractor sled and overpowering its opponent within the confines of a Dohyo playing field.

Background

The importance behind our project is the design of a robot that will enable students to further develop their skills in a rapidly growing field, while understanding the impact these devices have on the safety and productivity in the workplace.

Requirements

First Event: Block pull

The Robot will pull several weighted blocks down the pull field.

Second Event: Block push

The Robot will detect a randomly placed block and push it out of the Dohyo arena.

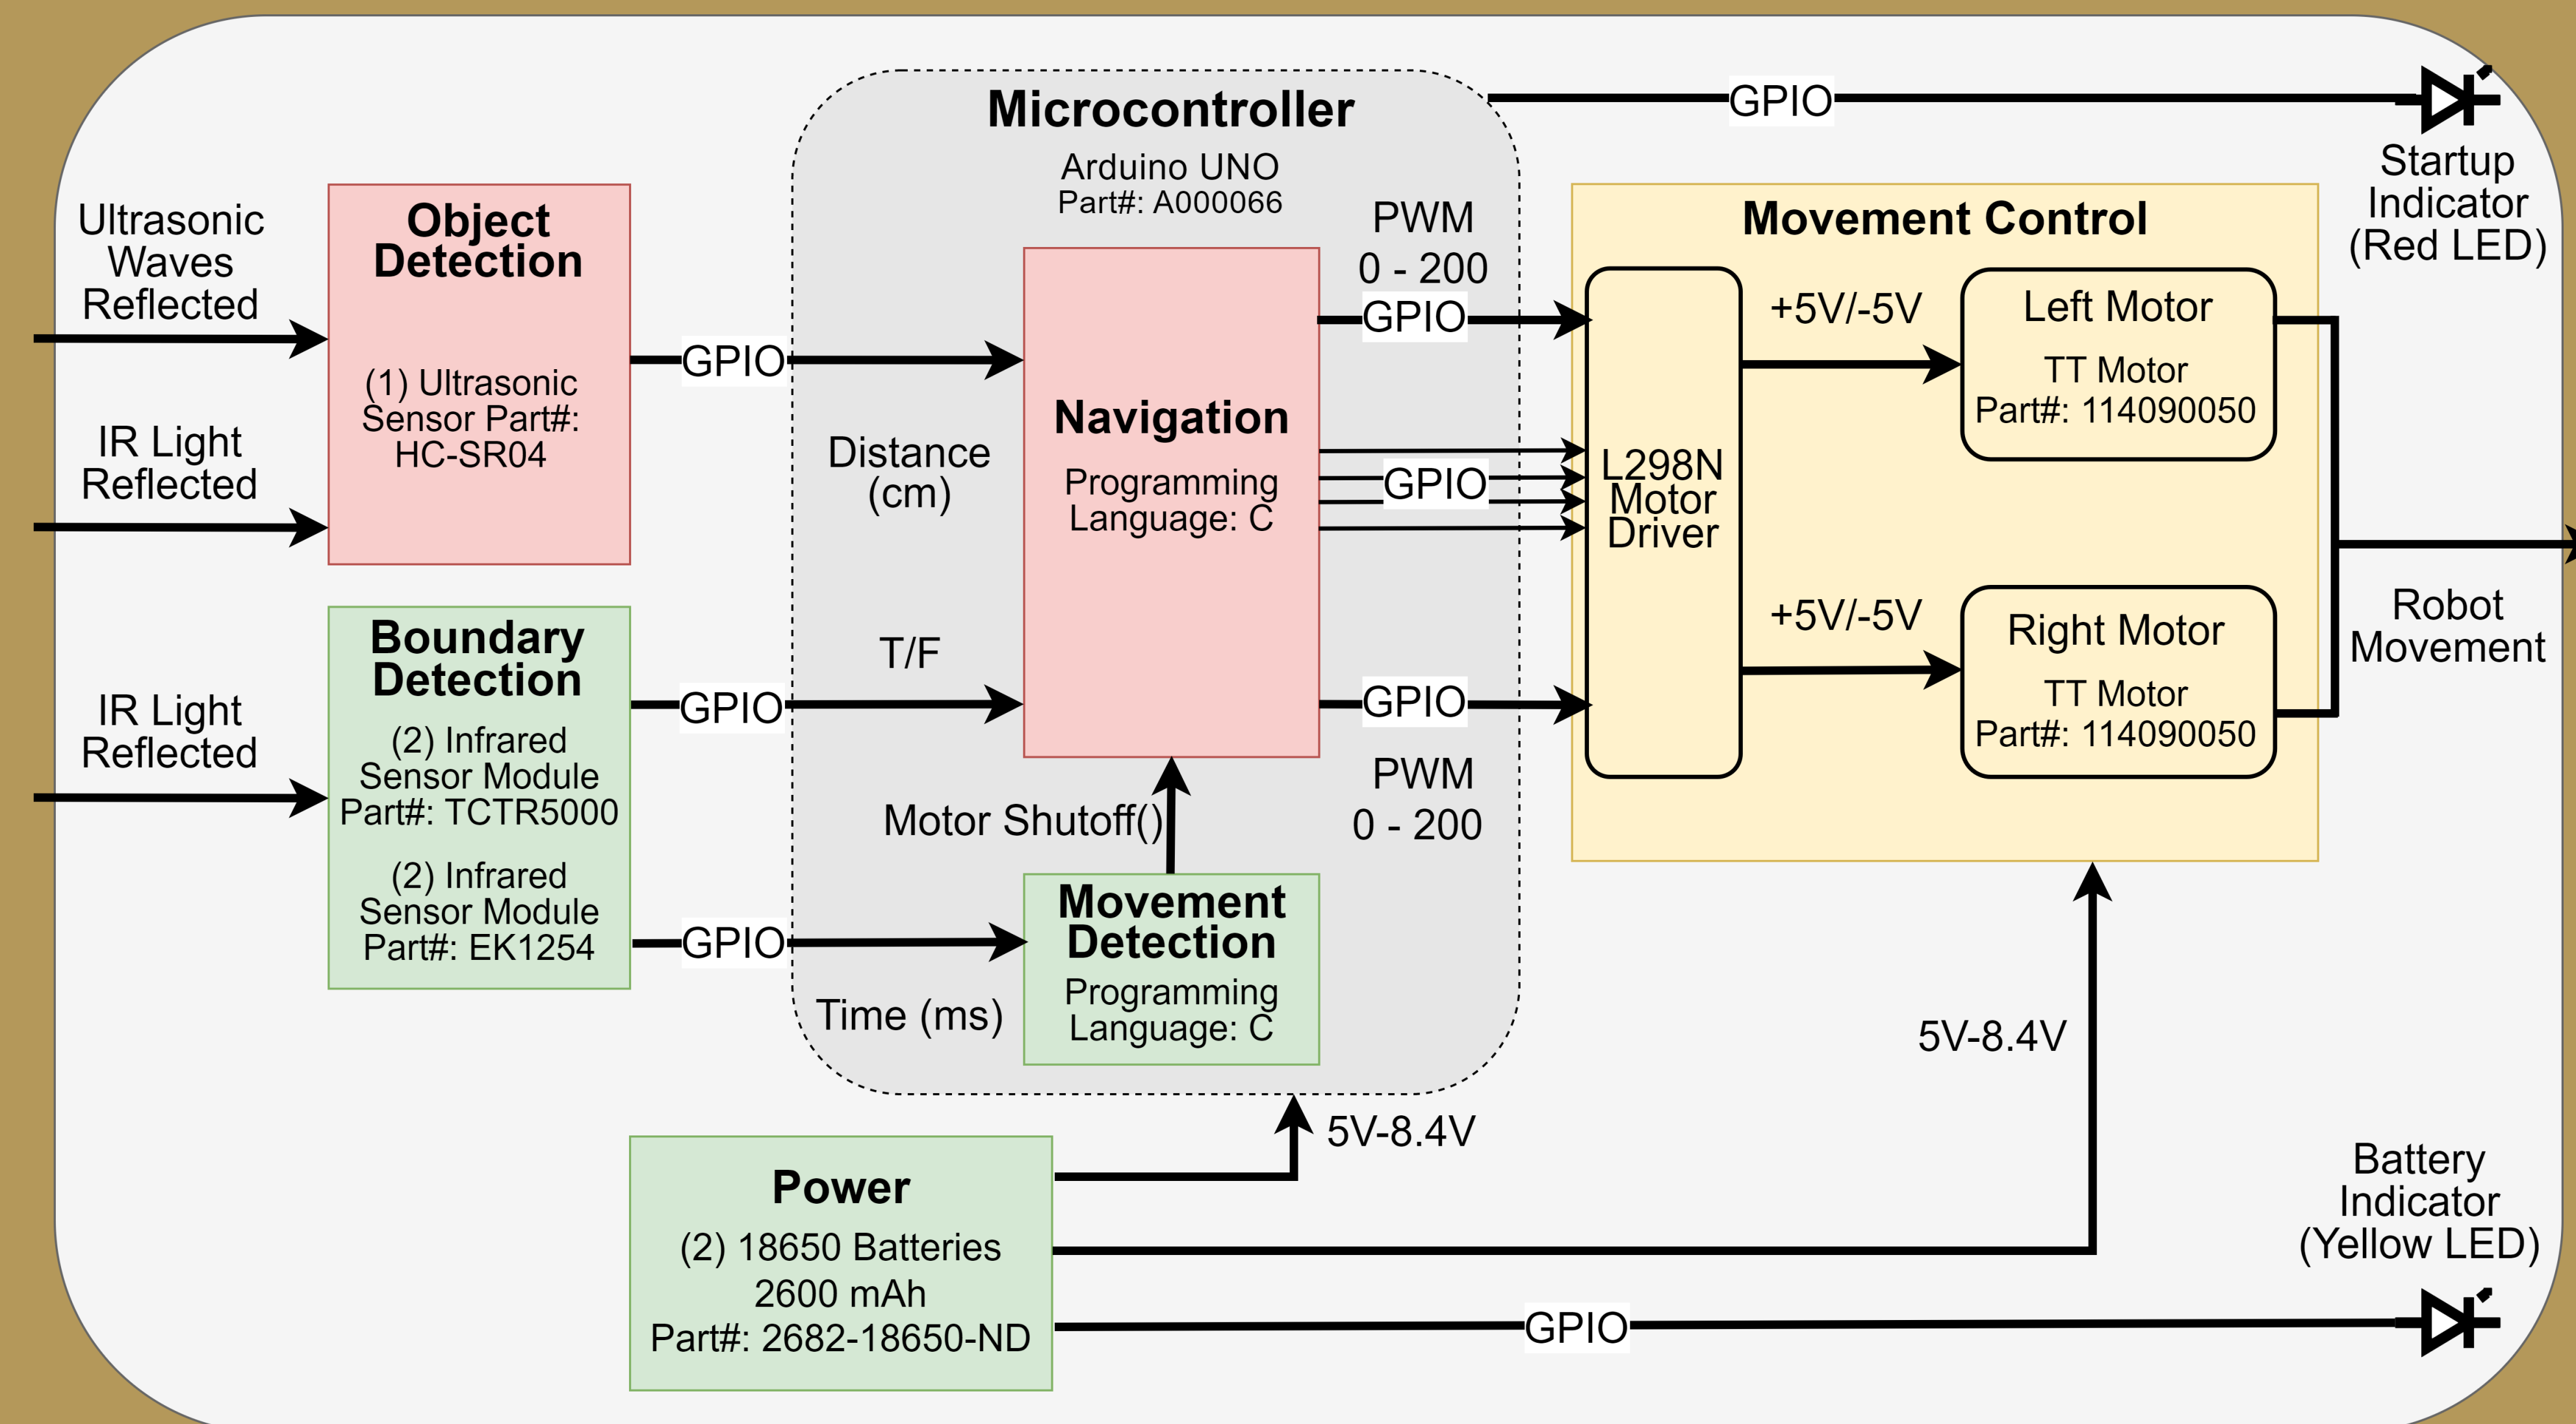

Playing Fields

Budget

Component	Quantity	Price per unit	Subtotal Cost
Hosyond Smart Robot Car Kit, 2WD	1	\$29.99	\$29.99
TCRT5000 IR Sensor Modules	2	\$0.88	\$1.76
16mm Height Metal Caster Bearing	1	\$1.95	\$1.95
EK1254	1	\$0.35	\$0.35
Original Unit Cost Requirement:	\$79.99/unit	TOTAL UNIT COST	\$34.05
Non-labor expenses to date:	\$242.79

Sensor Placement

D2 Plan

- Integrating new microcontroller, chassis, and motor options.
- Refine code to incorporate sumo competition.
- Testing and optimizing algorithms.
