Experiences in Anthropology

The anthropology major focuses on the study of humanity, exploring the biological and cultural aspects of human life across time and space through archaeology, biological anthropology, cultural anthropology, and linguistic anthropology. The curriculum covers a broad range of topics within these four subfields. Students may choose between a bachelor of arts or bachelor of science degree. Students pursuing either degree can participate in department field schools and internship programs. The department hosts a number of research centers (Forensic Anthropology Center at Texas State, Center for Archaeological Studies, Innovative Anthropologies Lab) that provide opportunities for students and sponsor long-term field projects. Students may participate in faculty-led study abroad or Study in America trips. They are encouraged to develop their professional networks at department-sponsored clubs and events as well as present their research and internship experiences at the Annual Anthropology Student Research Conference and other professional conferences.
