DEGREE PROGRAMS OFFERED

Bachelor of Science (BS), major in Concrete Industry Management

Bachelor of Science (BS), major in Construction Science and Management

Bachelor of Science in Technology (BST), major in Engineering Technology (Electrical Engineering Technology Specialization)

Bachelor of Science in Technology (BST), major in Engineering Technology (Construction Engineering Technology Specialization)

Bachelor of Science in Technology (BST), major in Engineering Technology (Environmental Engineering Technology Specialization)

Bachelor of Science in Technology (BST), major in Engineering Technology (Manufacturing Engineering Technology Specialization)

Bachelor of Science in Technology (BST), major in Engineering Technology (Mechanical Engineering Technology Specialization)

Bachelor of Science in Technology (BST), major in Industrial Technology

Bachelor of Science in Technology (BST), major in Industrial Technology (Teacher Certification)

Bachelor of Science in Technology (BST), major in Industrial Technology-Manufacturing Technology

MINOR OFFERED

Technology

The mission of the Department of Engineering Technology is to prepare students for technical/professional careers in industry and education. The mission is accomplished through a dedicated faculty offering programs in specialized areas with a formal, technical focus. Upon graduation, students are prepared to assume positions of professional responsibility in the areas of manufacturing, construction, concrete industry management, computer aided technologies, electronics, and education. Fourteen well-equipped technical laboratories serve to educate students in the techniques and processes used by contemporary world class industries.

The Bachelor of Science in Technology major in Engineering Technology provides students with the technical background to work with engineers in planning production processes, developing tooling, establishing quality assurance procedures, developing safety programs, establishing work methods, and setting time standards. Students can specialize in Electrical Engineering Technology, Construction Engineering Technology, Environmental Engineering Technology, Manufacturing Engineering Technology, and Mechanical Engineering Technology. The Bachelor of Science in Technology major in Industrial Technology prepares

students for work in industry in materials, processes, industrial safety, and concepts of industrial management. This degree has program majors in Manufacturing, and General Technology. The General Technology major, under Industrial Technology, can be customized to meet specific student needs offering opportunities in electronics, industrial safety, education, etc. Students interested in exploring such opportunities should see an Engineering Technology Department advisor for more details.

The Bachelor of Science major in Concrete Industry Management (CIM) prepares students who are grounded in basic construction management, who are knowledgeable in concrete technology and techniques and who are able to manage people and systems to promote products and devices related to the concrete industry. CIM professionals find a wide array of opportunities in the concrete industry including positions in sales, operations, technical services and construction management.

The Bachelor of Science major in Construction Science and Management prepares students to enter professional careers in the construction industry. Graduates may become construction and project managers, estimators, schedulers, field engineers, general and/or subcontractors, code inspectors, home and commercial contractors, material suppliers and technical sales representatives. Students learn the technical aspects of how construction projects are completed through classes in residential building, engineering and industrial construction, and they learn how to manage construction through the required business minor and courses in estimating, scheduling and project management. Career opportunities are many in this industry, which comprises 16% of the Gross National Product. **This degree program is accredited by the American Council for Construction Education (ACCE).**

Teacher Certification

A student seeking certification to teach at the secondary level must take CI 3325, 4332, 4343, 4370, RDG 3323 and EDST 4681. The student who has further questions should see the undergraduate advisor in Engineering Technology.

Bachelor of Science (BS)
Major Concrete Industry Management
(Minor in Business Administration)

**Bachelor of Science (BS)
Major in Construction Science and Management
(Minor in Business Management)
Minimum required: 124 semester hours**

General Requirements:

1. A minimum of 9 writing intensive hours and a total of 36 advanced hours are required to graduate. An advanced course is one that is numbered above 3000 and below 5000.
2. Departmental requirements that also satisfy the general education core curriculum requirements for the following components: mathematics- MATH 2417; natural science- CHEM 1341/1141 and PHYS 1315/1115 or 1410; humanities and visual and performing arts component- PHIL 1320; and social science- ECO 2301. See the [Academic Services](#) section of this catalog for the English literature requirements.
3. If two years of the same language are taken in high school, then no additional language hours will be required for the degree. In the absence of such high school language, two semesters of the same modern language must be taken at the college level.
4. Effective Fall 2010: No "D" grades received at other institutions will be credited towards the major.
5. Effective Fall 2010: Students will enter the 30 semester hour Pre-Construction Curriculum, which will consist of MATH 2328, MATH 2417, CHEM 1341/1141, PHYS 1315/1115, PHYS 1325/1125, **CSM 1260**, **CSM 2313**, **CSM 2342** and **CSM 2360**. No grade lower than a "C" will be accepted and a 2.5 GPA must be maintained in these classes before a student will be allowed to enroll in advanced level Construction courses.
6. After completing the Pre-Construction Curriculum, students will be allowed to enter the Bachelor of Science Degree in Construction Science and Management, and will be allowed to enroll in the following Construction classes: **CSM 2160**, **CSM 3360**, **CSM 3361**, **CSM 3363**, **CSM 3366**, **CSM 3367**, **CSM 4360**, **CSM 4364**, **CSM 4368** and **CSM 4369**.

Bachelor of Science in Technology (BST)
Major in Industrial Technology-Manufacturing Technology
Minimum required: 120 semester hours

General Requirements:

1. A minimum of 9 writing intensive hours and a total of 36 advanced hours are required to graduate. An advanced course is one that is numbered above 3000 and below 5000.
2. Departmental requirements that also satisfy the general education core curriculum requirements for the following components: mathematics- MATH 1317 or 2417; natural science- CHEM 1341/1141 and **PHYS 1315/1115**; and social science- ECO 2301. See the [Academic Services](#) section of this catalog for the English literature requirements.
3. If two years of the same language are taken in high school, then no additional language hours will be required for the degree. In the absence of such high school language, two semesters of the same modern language must be taken at the college level.
4. Technology electives must be chosen in consultation with the departmental advisor. Electives outside of Technology should be chosen in consultation with the departmental or academic advisor.

Minor in Technology

A minor in Technology requires 18 hours of Technology courses, of which 9 hours must be advanced. Courses will be determined by conference with a **departmental faculty advisor** or the Chair of the Department.

Driver and Traffic Safety Education Certification

Students seeking State of Texas Certification in Driver's Education must complete nine semester hours of TECH 4383, 4385, and 4393. For more information on this program contact the Director of the Traffic Safety Center.

Courses in Concrete Industry Management (CIM)

3330 Concrete Construction Methods. (3-0) This course covers forming, shoring, placing and reinforcing operations. Transporting, placing, consolidating, finishing, jointing and curing concrete for cast-in-place foundations, pavements, slabs on ground, structural frames, and other structural members are studied. Other topics include waterproofing concrete foundations and erecting precast concrete members. Prerequisite: CIM 3420.

3340 Understanding the Concrete Construction System. (3-0) A detailed look at how the concrete construction industry works. The course includes a review of model building codes, building officials and their function, concrete industry codes and standards, concrete construction processes, quality assurance systems, contract documents, estimating, construction scheduling and concrete construction markets. Prerequisite: MATH 2328 and CIM 3420.

3366 Applications of Concrete in Construction. (3-0) This course is a detailed study of the many uses of concrete in the construction of buildings, pavements and other facilities. Emphasis will be placed on the advantages, disadvantages, and unique problems faced by materials suppliers, contractors and design professionals when concrete is chosen for specific applications. Prerequisite: CIM 3330.

3420 Fundamentals of Concrete: Properties and Testing. (3-2) This course examines effects of concrete-making materials (aggregates, cements, admixtures, etc.) on the properties of fresh and hardened concrete. Concrete mixture proportioning calculations and statistical analysis of strength tests are also studied. Prerequisite: TECH 2342.

4210 Senior Concrete Lab. (1-2) This course provides students an opportunity to further develop their technical and laboratory knowledge and pursue a project of individual interest. A formal report/presentation will be required at the conclusion of the course. Prerequisite: CIM 4340.

4310 Senior Concrete Lab (1-3) This course provides students an opportunity to further develop their technical and laboratory knowledge and pursue a project of individual interest. A formal report/presentation will be required at the conclusion of the course. **Prerequisite: CIM 3366.**

4320 Issues in Concrete and Construction Industry. (3-0) This course involves a case study approach to critically analyze various historical and current events in the concrete and construction industry. Particular emphasis will be placed upon developing a managerial decision-making process incorporating ethical, legal, financial and other business perspectives. Prerequisites: CIM 3340, MGT 3303, FIN 3325,

and BLAW 2361.

4330 Management of Concrete Products – Ordering and Scheduling. (3-0). This course is designed to provide the student with a basic understanding of managing the ordering and delivery process common to all concrete products. Emphasis will be in planning, organizing and controlling at both the first-line supervisory and managerial levels. Prerequisites: CIM 3340 and MGT 3303.

4340 Concrete Problems: Diagnosis, Prevention and Dispute Resolution. (3-0) Course involves diagnosing/preventing problems related to concrete production, testing, construction and performance. Students learn to identify causes of fresh and hardened concrete problems, i.e. fast and slow setting, air content variations, low strength, cracking and scaling. Pre-job conferences and dispute resolution methods are examined. Prerequisite: CIM 3366.

4398 Capstone. (3-0) An intensive study of a problem(s) appropriate to the major/student's career interests. Requires knowledge from previous technical/business coursework. Solution(s) for the problem(s) will be presented to an industry committee. Presentation must emphasize depth of analysis, completeness/effectiveness of solution, and presentation skills. Prerequisites: CIM 4330 and 4340. (WI)

Courses in Construction Science and Management (CSM)

1260 Introduction to the Construction and Concrete Industry. (2-0) This is an introductory course for Construction and Concrete Industry Management (CIM) majors. Residential, commercial, heavy, civil and highway construction is explored including the concrete industry. The role of the contractor, architect/engineer and owner are covered including contracts, careers, sustainability and economic importance of the construction industry.

2160 Introduction to Construction Surveying and Site Layout. (1-1) Common construction surveying and site layout techniques are studied using both optical levels and total stations. Benchmarks, building lines, property lines, differential and profiling are discussed in lecture with applied exercises performed in the laboratory. Prerequisite: Pre-Construction or Instructor's Approval.

2313 Fundamentals of Architectural Problem-Solving and Design. (2-2) This is an introduction to the language of architectural design. Use of the computer and CAD software in the design process. Elements of projection theory to include orthographic and perspective projection. Solving complex problems of building geometry. Section views and their relationship to architectural detailing. Emphasis on the successful integration of construction documents.

2342 Construction Materials and Processes. (3-1) This course will introduce students to various types of construction materials including ceramics, ferrous, non-ferrous, and organic materials used in construction. Their properties, working characteristics and processes used to manufacture and assemble these materials are studied. Laboratory activities are used to reinforce lecture material. Prerequisite: CHEM 1341 and 1141 and PHYS 1410.

2360 Residential Construction Systems. (2-2) A residential construction course, which deals with interpreting plans and specifications, along with studying site work, foundations,

walls, roofing, ceilings, floor and finishing systems. Also, residential MEP systems are covered along with applicable building codes and construction financing. Prerequisite: CSM 2342 or Instructor's Approval.

- 3360 Structural Analysis. (3-3) This is a structural engineering fundamentals to include design loads, reactions, force systems, functions of a structure and the analysis of statically determinate and indeterminate structures by classical and modern techniques. Prerequisite: TECH 2351.
- 3361 Commercial Building Construction Systems. (3-0) This is a commercial building construction systems class that deals with soils, site work, heavy foundations, steel, reinforced concrete and pre-cast structures along with common assemblies. Commercial MEP's are studied along with CSI master format, as-built and shop drawings, schedule of values, AIA documents and appropriate building codes. Prerequisite: Pre-Construction or Instructor's Approval.
- 3363 Heavy, Civil and Highway Construction Systems. (3-1) Selection, acquisition and capabilities of heavy construction equipment are presented. Applications of economics to performance characteristics and production of equipment is discussed. Sector-specific construction management methods are covered, including unit price estimating, equipment fleet design, repetitive scheduling and major components of highways, bridges and engineered facilities. Prerequisite: Pre-Construction or Instructor's Approval.
- 3366 Soils and Foundation. (3-0) Properties of subsurface materials and the principles of subsurface construction are studied. Topics include soil classification and testing, soil mechanics and foundation systems, including site layout, excavation, caissons, piles, slurry wall, slab and spread footings. Prerequisite: Pre-Construction and TECH 2351 or Instructor's Approval.
- 3367 Mechanical, Electrical, and Plumbing Systems. (3-1) This course covers typical Mechanical, Electrical and Plumbing (MEPs) systems found in residential and commercial construction along with design and installation methods used to conserve both energy and water in new and remodeled structures. Prerequisites: CSM 2313, 2342 and 2360 or Instructor's Approval.
- 4313 Advanced Architectural Design. (2-2) This is an architectural CAD techniques and principles of commercial construction class including exterior and interior drawings and details, essentials of plans, elevations, sections and perspective aspects of architectural documents. Structural, mechanical, electrical, plumbing, ADA and green building issues are discussed. Design and/or construction documents will be produced through group participation projects. Prerequisite CSM 2313.
- 4361 Construction Estimating. (2-2) The fundamentals of construction estimating are covered including feasibility, conceptual, square feet, cubic feet, unit in place, preliminary, engineering, range and contractor's detail bid estimates. Plans and specifications are used along with contemporary estimating software to develop estimates commonly used in the construction industry. Prerequisite: Pre-Construction and CSM 3361 or Instructor's Approval.
- 4364 Construction Project Management and Scheduling. (3-1) Concepts of construction management are studied beginning with contract documents through the effective management

of manpower, machines, material and money necessary to complete construction projects on time and within budget. Gantt Charts and PERT/CPM schedules are developed, using contemporary software. Prerequisite: Pre-Construction and CSM 4361 or Instructor's Approval.

- 4368 Environmentally Conscious Design and Construction. (3-1) This course covers environmentally sustainable practices used in building design and construction. THE LEED system will be used to guide the course, which covers aspects of sustainable sites, water efficiency, energy and atmosphere, materials and resources, indoor environmental quality and the CAD design process. Prerequisite: Pre-Construction or ID 2329 and CSM 2313 or Instructor's Approval. (WI)
- 4369 Construction Contracts, Liability, and Ethics. (3-0) Legal aspects of design and construction contract documents are presented, including contract formation, interpretation, rights and duties and changes. Legal liabilities are explored in the context of professional ethics for design firms and constructors. Prerequisite: Pre-Construction and recommended: MGT 3303 and/or MG 3360 or Instructor's Approval.

Courses in Technology (TECH)

- 1330 Assembly Processes. (2-2) Basic assembly process to include gas, arc, resistance, thermite, induction, and forge welding; weld-ability, weld metallurgy, weld symbology, and weld testing; brazing; soldering; mechanical fastening to include threaded fasteners, rivets, shrink and press fits, seams, staples, crimping, and structural adhesives. Principles of joint design and cost estimation. An overview of electronics assembly processes and automated assembly.
- 1363 Manufacturing Processes I. (2-3) The course will provide an overview of the manufacturing processes. Major emphasis is placed on machining theory, setup and tooling. Metal forming and fabrication procedures are introduced. Joining and assembly includes welding, mechanical fastening, adhesive bonding and surface finishing concepts. Laboratory demonstrations and tutorials involve machining, joining and forming techniques.
- 1393 Manufacturing Processes II. (2-3) The course involves the fundamentals of casting and molding processes. Emphasis is placed on casting terminology, molding sand, molding processes, pattern making, coremaking and quality control. Ferrous and non-ferrous alloy composition and casting geometry are explored. Plastic and composite forming concepts are included. Microelectronic manufacturing principles and processes are introduced.
- 2310 Introduction to Computer-Aided Design (CAD) (3-3) Principles of 3D modeling are introduced in the preparation of drawings for manufacturing processes. Emphasis includes the parametric solid modeling of machine elements and geometric dimensioning and tolerancing. The laboratory component involves production of engineering drawings and simulations connecting this course to computer-aided engineering. Prerequisite: ENGR 1313 or Instructor's Approval.
- 2330 Fundamentals of Material Removal. (3-0) An overview of the micro and macro structure of materials is studied. Assessment of materials with regard to their chemical and mechanical properties and how these properties relate to

- machining is explored. Machining conditions with regard to feed, speed, surface finish, tooling requirements, horsepower capabilities, time, and cost analysis complete the class. Prerequisite: MATH 1315.
- 2344 Power Technology. (2-2) This class deals with understanding the basic laws of thermodynamics. It probes the issues of efficiency and examines energy-converting devices from the inputs, processes, outputs model. Internal combustion engines, electric motors, hydraulic systems, pneumatic systems, wind electric systems, solar energy systems and gearing systems. Fuel analysis, lubricants and friction all comprise essential topics. Prerequisite: MATH 1315 and PHYS 1315/1115 or 1410 or PHYS 1430.
- 2351 Statics and Strength of Materials. (3-0) Course covers principles of statics and strength of materials to include forces, equilibrium, friction, centroids, and stress/strain relationships, axial stress and deformation, thermal stress and deformation, stress concentrations, factor of safety, torsional stress, beam stresses and combined stress. Prerequisite: TECH 2342 or ENGR 2300 and PHYS 1315/1115 or 1410 or 1430 with a minimum grade of C.
- 2370 (ENGR 2305) Electricity/Electronics Fundamentals. (2-2) Fundamentals of safety, Ohm's Law, series, parallel, and series-parallel circuits, meters, relays, and basic transistor circuits.
- 3322 Development of Technology. (3-0) The role of technology in the development of Western World culture is studied from a technical perspective. Social repercussions resulting from the introduction of foundational technical developments are reviewed. Examples of technical areas examined are agriculture, transportation, manufacturing, engineering, defense, and communications. Readings focus discussions and papers on specific topics and encourage synthesis level understanding. (WI)(MC)
- 3344 Applied Thermofluids. (3-0) Basic concepts, first and second laws of thermodynamics, thermodynamic properties, heat transfer by conduction, convection and radiation, fluid statics and fluid dynamics are studied. Prerequisites: TECH 2344 and PHYS 1430.
- 3357 Facilities Planning and Design. (3-0) This project-based course provides students with a practical knowledge of designing efficient facility layout and material handling system. Systematic layout planning (SLP) based on a product and process information is studied in depth. Simulation tools are used for flow analysis. Prerequisites: TECH 2310.
- 3364 Quality Assurance. (3-0) This course covers the principles of quality management to include basic probability and statistics concepts, control charts for attributes and variables, sampling plans, quality audits and costs. The laboratory component of this class includes exercises that provide exposure to basic metrology and data collection.
- 3370 Electronics. (2-2) A study of the characteristics of basic electronic circuits and their component parts. Course content includes the use of electronic test equipment, inductance, capacitance, reactance, impedance, rectification, switching, amplification, and electronic circuit fabrication. Prerequisite: TECH 2370 or EE 2400.
- 4197 Special Problems. (1-0) The investigation of a special topic by developing the problem, researching the topic, and presenting the findings as they apply to industry/technology. This course will be applicable to all areas of technology, and must be done only with the approval of the cooperating faculty member and Department Chair. Repeatable for credit with different emphasis.
- 4321 Flight Instruction Academics. (3-0) Provides instruction necessary to pass the Federal Aviation Administration written examination in order to fulfill academic requirements for a private pilot's license. Includes instruction in: Aircraft Pre-Flight; Flight and System Controls; Federal Aviation Agency Regulations; Navigation; Weather; Weight and Balance; Radio Communications; and Airman Information Manual.
- 4330 Foundry & Heat Treatment. (3-3) The technical aspects of foundry and heat treatment of ferrous and non-ferrous metals are reviewed. Students gain proficiency with interpretation of binary phase diagrams, mathematical modeling of gate and runner systems, micro-structural analysis, process cost evaluation, sand testing, investment casting and other technical processes. Prerequisites: TECH 2310, ENGR 2300 and TECH 2351 or MFGE 2332 or Instructor's Approval. (WI).
- 4345 Principles of Lean Systems. (3-0) The course provides an in-depth understanding of the lean principles as they apply to manufacturing and service organizations. with emphasis on lean tools and concepts such as Value Stream Mapping, 5S, kaizen, waste, takt/cycle time, visual control, six-sigma, mistake proofing, single piece flow, cell design and pull systems. Prerequisites: TECH 3364.
- 4360 Senior Construction Contract Administration. (3-3) Student teams solve technical problems related to a real-world, construction project typically supplied by an industry sponsor using skills from previous coursework. Typical areas covered are business ethics, proposals, owner contracts, alternate project delivery methods, bid packages, guaranteed maximum price (GMP), site logistics, scheduling and team building. Prerequisite: Pre-Construction coursework or MATH 2471 and TECH 4313, TECH 4361, TECH 4364, TECH 4369 or Instructor's Approval. Recommended TECH 4390.
- 4362 Manufacturing Process Engineering. (1-3) This course will provide students with fundamentals of manufacturing processes engineering. Major emphasis will be placed on make-buy analysis, tolerance analysis and dimensional control, tool design, process and material selection, manufacturability analysis, and process planning. Prerequisites: TECH 1393 and TECH 2310.
- 4365 Machine Elements: Dynamics and Design. (3-0) Principles of the design of mechanical components; theories of failure; material selection; design of shafts, gears, cams, fasteners, springs and brakes; dynamics; balancing of machinery and vibration control are studied. Prerequisites: TECH 2310 and TECH 2351.
- 4367 Polymer Properties and Processing. (3-1) Structure, physical & mechanical properties, design considerations and processing methods for polymer-based materials are presented. Processing methods include: injection molding, blow molding, thermoforming, compression molding, extrusion, filament winding, lay-up methods, vacuum bag molding and pultrusion. Prerequisite: ENGR 2300.
- 4372 Electronic Devices and Circuits. (2-2) Transistor

- configurations, field effect transistors and circuits, voltage regulation, amplifier feedback principles, operational amplifiers and circuitry, and unijunction transistors and applications. **Prerequisite:** TECH 2370 or EE 2400.
- 4373 **Control Systems and Instrumentation.** (2-2) A study of control systems, electrical switching, electrical generation, motors, wiring, illumination, and temperature controls as they apply to industry. Electronic product development and manufacturing are studied through classroom and laboratory activities. **Prerequisite:** TECH 2370 or EE 2400.
- 4374 **Digital Systems.** (2-2) Solid state digital electronics from basic concepts to current industrial needs in terms of logic gates (all types), number systems counters (all types), registers (all types), sequential control circuits, and shift register generator. **Prerequisite:** TECH 2370 or PHYS 2425.
- 4380 **Industrial Safety.** (3-0) Introduction to the field of industrial safety with emphasis on compliance with Federal and State regulations. **Prerequisite:** Junior standing. (WI)
- 4383 **Driver and Traffic Safety Education I.** (3-0) Content, methods, and materials for instruction in the classroom phase of driver education in Texas. Topics include Texas traffic law; Texas Education Agency standards for high school driver education; driver behavior, attitude, and psychomotor skills; and safety in the highway transportation system.
- 4385 **Driver and Traffic Safety Education II.** (3-3) Content, methods and materials for instruction in the laboratory phase of driver education in Texas. Topics include in-car instruction, multi-car range, and simulation. During laboratory sessions participants will observe in-car instructors, peer teach in the car, and teach a high school student how to drive. TECH 4383 and 4385 will be taken simultaneously. **Prerequisites:** TECH 4383 and a good driving record.
- 4387 **Motorcycle Safety and Rider Education.** (3-3) Techniques and methods of teaching beginner rider education. Includes classroom techniques as well as laboratory experience in on-street and off-street riding. Not applicable to the BS in Technology program.
- 4390 **Internship.** (0-40) Supervised on-the-job professional learning experience in construction, manufacturing, electronics, and other technical areas. This course provides practical work experience in their particular field of interest. Repeatable for credit. **Prerequisites:** Consult internship coordinator. (WI)
- 4391 **Manufacturing Processes II.** (1-3) Involves a wide variety of advanced manufacturing techniques. Included are the following areas: differential indexing, electrical discharge machining, precision grinding, specialized thread cutting, high energy rate forming, tool grinding, tool behavior analysis, tool cost evaluation, and numerical control programming. An emphasis may be placed on certain processes mentioned above in order to meet the specific needs of various classes. **Prerequisites:** TECH 2330, 4362; MATH 1315.
- 4392 **Micro and Nano Manufacturing.** (3-0) This class will cover the basic principles and techniques involved in micro and nano manufacturing. Emphasis will be placed on the process descriptions, terminology, equipment requirements, and processes for micro and nanosystems. Basic physics and process chemistry will be combined with control schemes to arrive at overall systems descriptions. **Prerequisites:** CHEM 1141 and CHEM 1341 and PHYS 1325 or PHYS 1420 or **PHYS 2425.**
- 4393 **Driver and Traffic Safety Education III.** (3-3) Content, procedures, and administration of multi-phase driver education programs. Topics include scheduling, maintenance and operation of laboratory equipment, record keeping, lesson plan development, and driver education for the handicapped. Practicum in classroom and/or simulation instruction. Not applicable to the Bachelor of Science in Technology degree program. **Prerequisite:** TECH 4383, 4385, and TECH 4393 may be taken simultaneously.
- 4394 **Microelectronics Manufacturing II.** (3-0) This is an intermediate level course in integrated circuit processing. Topics covered include: atomic models for diffusion, oxidation and ion implantation; topics related to thin film processes such as chemical vapor deposition, physical vapor deposition; planarization by chemical-mechanical polishing and rapid thermal processing; and process integration for bipolar and MOS device fabrication. Students will design processes and model them using a simulation tool such as SUPREM.
- 4395 **Automated Manufacturing Systems I.** (2-2) This course primarily deals with automation in industrial systems. In particular, this course focuses on automation and control technologies in manufacturing systems at machine and device levels. Included in its structure are areas such as fundamentals of industrial automation, sensors and actuators, numerical control, robotics, and PLC. **Prerequisites:** TECH 4362 or TECH 4372.
- 4396 **Automated Manufacturing Systems II.** (3-3) This course primarily deals with automation in industrial systems. In particular, this course focuses on automation and control technologies at a system level. This course includes topics such as simulation of manufacturing systems, flexible manufacturing systems, automated quality control, automated identification, and automated material handling. **Prerequisites:** TECH 4395.
- 4397 **Special Problems.** (3-0) The investigation of a special topic by developing the problem, researching the topic, and presenting the findings as they apply to industry/technology. This course will be applicable to all areas of technology, and must be done only with the approval of the cooperating faculty member and Department Chair. Repeatable for credit with different emphasis.
- 4399 **Seminar in Technology.** (3-0) The topics for this course will vary. The course will involve the identification of the topic, its nomenclature, its processes, tools, equipment or materials, and its application to technology. The topic may apply to either the certification program or technology program or to both. A final report summary or presentation will conclude each seminar. Repeatable for credit with different emphasis.
